Security Report - HNY

Generated 2026-11-10 03:17:41.576598+00:00 · Report ID example-honeypot

Overall risk

Score	72/100
Classification	High risk

- +60 pts [critical/confirmed/simulation] Token can be bought but cannot be sold
- +5.04 pts [medium/suspicious/source_code] Trading can be gated by the owner
- +5.04 pts [medium/suspicious/source_code] Whitelist / privileged exemptions detected
- +2.1 pts [low/suspicious/source_code] Ownership is transferable
- Findings are de-duplicated by category; the strongest finding per category is scored.

Token information

Name	Honeypot Token
Symbol	HNY
Address	0xCf7Ed3AccA5a467e9e704C703E8D87F634fB0Fc9
Chain	Local Anvil (mock DEX) (chain id 31337)
Decimals	18
Total supply	1000000000000000000000000
Owner	0xf39Fd6e51aad88F6F4ce6aB8827279cffFb92266
Contract type	ownable_erc20
Proxy	no
Verified source	None
Analysis block	8

Buy / sell simulation

Scenario	Wallet	Buy	Buy tax	Sell	Sell tax
medium	0x00000000...	ok	0.00%	FAIL	-

Effective taxes: inconclusive

- Example generated against a local mock DEX with the Foundry fixtures.

Security findings (5)

[MEDIUM] Trading can be gated by the owner (suspicious, source_code, transfer_restriction)

Trading must be enabled by the owner; until then transfers revert. Evidence: verified source contains the relevant logic; function selector present in bytecode.

Impact: Owner never enables trading or re-disables it to trap buyers.

Mitigation: Confirm trading cannot be disabled after launch.

[LOW] Ownership is transferable (suspicious, source_code, ownership)

Ownership can be handed to any address, including an unverified one. Evidence: verified source contains the relevant logic; function selector present in bytecode.

Impact: Ownership is moved to a contract that re-enables malicious powers.

Mitigation: Track the ownership target.

[CRITICAL] Token can be bought but cannot be sold (confirmed, simulation, honeypot)

An on-fork buy succeeded but every sell attempt reverted. This is the defining honeypot behaviour: buyers are trapped.

Impact: Holders cannot exit; funds are effectively locked.

Mitigation: Do not buy this token.

[MEDIUM] Whitelist / privileged exemptions detected (suspicious, source_code, whitelist)

Transfer logic references whitelisting or privileged exemptions. Whitelist-only selling is a common honeypot pattern.

Impact: Only privileged wallets may be able to sell.

[MEDIUM] Owner-controlled trading gate (suspicious, bytecode, transfer_restriction)

Trading appears gated by an owner-controlled switch. This is often used by legitimate launches (anti-bot) but also by honeypots.

Unresolved uncertainties

• Example: bytecode selectors are heuristic.

Disclaimer

This report represents automated security analysis and simulation results. It is not a formal smart contract audit or a guarantee of token safety. A low score does not mean the token is safe.
